

How to use the Play cricket D/L calculator

Down load the App Play cricket .com

There will be a section that says **continue without logging in** which you click on . A selection of choices will appear , so click on **DLCalculator**

Follow these steps

1. **fill in number of overs you are starting with eg 50**
 2. **Make sure the first innings is underlined**
 3. **Fill in the final score if there has been no rain interruptions.**
- If there has been a rain break, at the bottom of the page you will see suspension periods and an arrow. Click on the arrow and then new suspension period on next page
 - under Heading **suspension 1** fill in the details eg
 - overs already played , what the total was when you came off , how many wickets had fallen and how many overs lost. (remember overs lost is 2 overs(1 off each side)for every 7 minutes lost
Example (off for 105 mins so that's 15 overs off each side)

eg overs played 12 Runs 40 wickets lost 1 Overs left after suspension 23

- Click done
- You are now playing 35 overs .
- Enter the score at the end of these overs. eg 140 and click second innings .

Second innings

- **Click on second innings and** you will see the second innings is 35 overs and the target is 151(target can increase because the batting side planned their innings for the full 50 overs.)
- You will see a heading **par score** , and boxes to fill in **overs** , **runs** and **wickets**
- Fill in these boxes as the game progresses. eg for the first over enter 1 in overs box, you will see the par score of 2 in the runs box.
- if 12 overs have been played **par scored** is 35
- if a wicket falls in that over then par score increases to 39
- You keep going until the target score has been reached or side is all out.
- You can add further suspensions periods in the same manner.

IT IS IMPORTANT TO TAKE NOTE WHEN COMING OFF FOR RAIN ,THE TOTALSCORE ,WICKETS LOST
NUMBER OF OVERS PLAYED AS WELL AS THE TIME.
